Right to Work in the UK, no sponsorship required

SUMMARY

Technical Lead with 8 years across four startups, promoted in 2025 after two consecutive years rated top performer and now leading a team of 4. My whole career has been owning products end to end in small teams: a Zero Trust security product built from nothing to 10+ enterprise customers, a company-wide reporting platform, and production LLM and MCP infrastructure. Node.js, TypeScript, NestJS, Golang, AWS. Every company I have worked for has asked me to come back.

CORE SKILLS

Languages Node.js, TypeScript, Python, Golang, JavaScript, SQL

Backend NestJS, FastAPI, REST APIs, GraphQL, microservices, event-driven architecture, system design

AI and LLM LLMs, RAG, LangChain, MCP (Model Context Protocol), AI agents, semantic search, graph databases, prompt engineering

Cloud and Infra AWS (ECS, SQS, S3), Docker, cloud-native architecture, CI/CD, performance testing

Databases PostgreSQL, MySQL, MongoDB, graph databases

Data Apache Airflow, Airbyte, DuckDB, ETL pipelines, data modelling, query optimisation

EXPERIENCE

Technical Lead | Josys Digital Technologies | Bengaluru, India | Aug 2022 to Jun 2026

Senior Software Engineer, Aug 2022 to Mar 2025. Promoted to Technical Lead in 2025. Left to relocate to the UK, where I now live and hold unrestricted right to work.

- Promoted to Technical Lead in 2025 after two consecutive years rated top performer, taking architectural ownership across multiple product teams.
- Led and mentored a team of 4 engineers through design reviews, pairing, and code review, and acted as the go-to reviewer for architecture decisions outside my own project scope.
- Coordinated delivery across 3 product teams as the backend architecture owner, resolving design disputes and setting the interface contracts between services.
- Ran technical interviews and onboarding for new backend hires, and set the review standards the team still works to.
- Cut new-engineer onboarding from 6 weeks to 3 weeks by championing NestJS as the company-wide backend standard and rolling it out across 12+ microservices.
- Reduced integration time for new services from 2 weeks to 2 days by building MCP (Model Context Protocol) clients and servers that standardised how AI agents communicate with backend services.
- Saved the engineering team 8 hours per week, a 60% reduction in manual data querying, by shipping an internal LLM platform for context-aware retrieval across production data sources.

Software Engineer (MTS-1) | InstaSafe | Bengaluru, India | May 2019 to Aug 2022

- Led 3 engineers delivering 6 security product enhancements, owning each from design through production.
- Contributed a new enterprise product line that helped onboard 10+ enterprise customers by designing and building a Zero Trust Network Access (ZTNA) solution from scratch.
- Cut enterprise customer onboarding time 40% by building a gateway server that gave agentless access to private web applications.

Earlier Experience | GrowthEnabler and Haappy | Bengaluru, India | Jan 2018 to May 2019

- Full-stack delivery on an SRM workflow platform, a startup-to-corporate matching system, WebTV sites, and an internal CRM.

SELECTED PROJECTS

- ffmpeg-mcp: open-source MCP server exposing video editing operations as tools callable by LLM agents. TypeScript, FFmpeg, MCP.

AWARDS

- 1st runner-up out of 14 teams, Josys company-wide internal hackathon: built a dynamic, AI-controlled workflow engine on MCP.
- Top performer rating, Josys, two consecutive years.

EDUCATION

B.E. Computer Science | East Point College of Engineering and Technology, Bengaluru | 2013 to 2017
